

TAC 15™

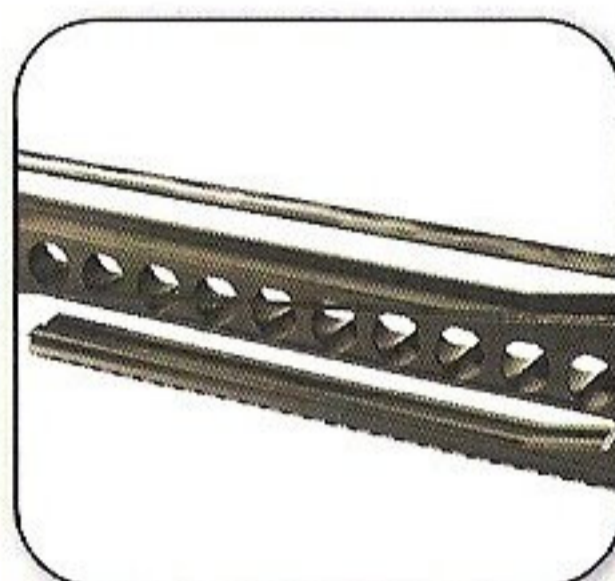

CONFIDENTIAL 2009 Dealer Product Guide

A marvel of innovation and engineering, only PSE could bring you the new TAC 15™. Designed to fit on any AR-15 lower receiver, the TAC 15™ is packed with innovative features that will have to be experienced to be believed. It all starts by incorporating the incredibly strong X Tech™ limbs into an extremely compact platform. The ultra-high performance twin-cam design shoots an amazing 412 fps and is capable of unprecedented accuracy. Plus, the TAC 15™ converts any AR-15 quickly and easily from a gun to a crossbow!

A patent-pending "D-loop" Anti-Dry Fire (ADF) mechanism is integrated into the release. Also, the TAC 15™ has the ability to be let down from full draw without being fired, creating a safer shooting platform.

A free-floating fore-grip delivers the ultimate in accuracy. Integrated MIL-SPEC 1913 (Picatinny) rails allow for mounting a scope, grip, bipod and a variety of other accessories.

The TAC 15's innovative "rail-less" design provides superior performance and shot accuracy.

The quick-cocking design and ergonomic high leverage crank allows the TAC 15™ to be loaded and shot in less than 30-seconds.

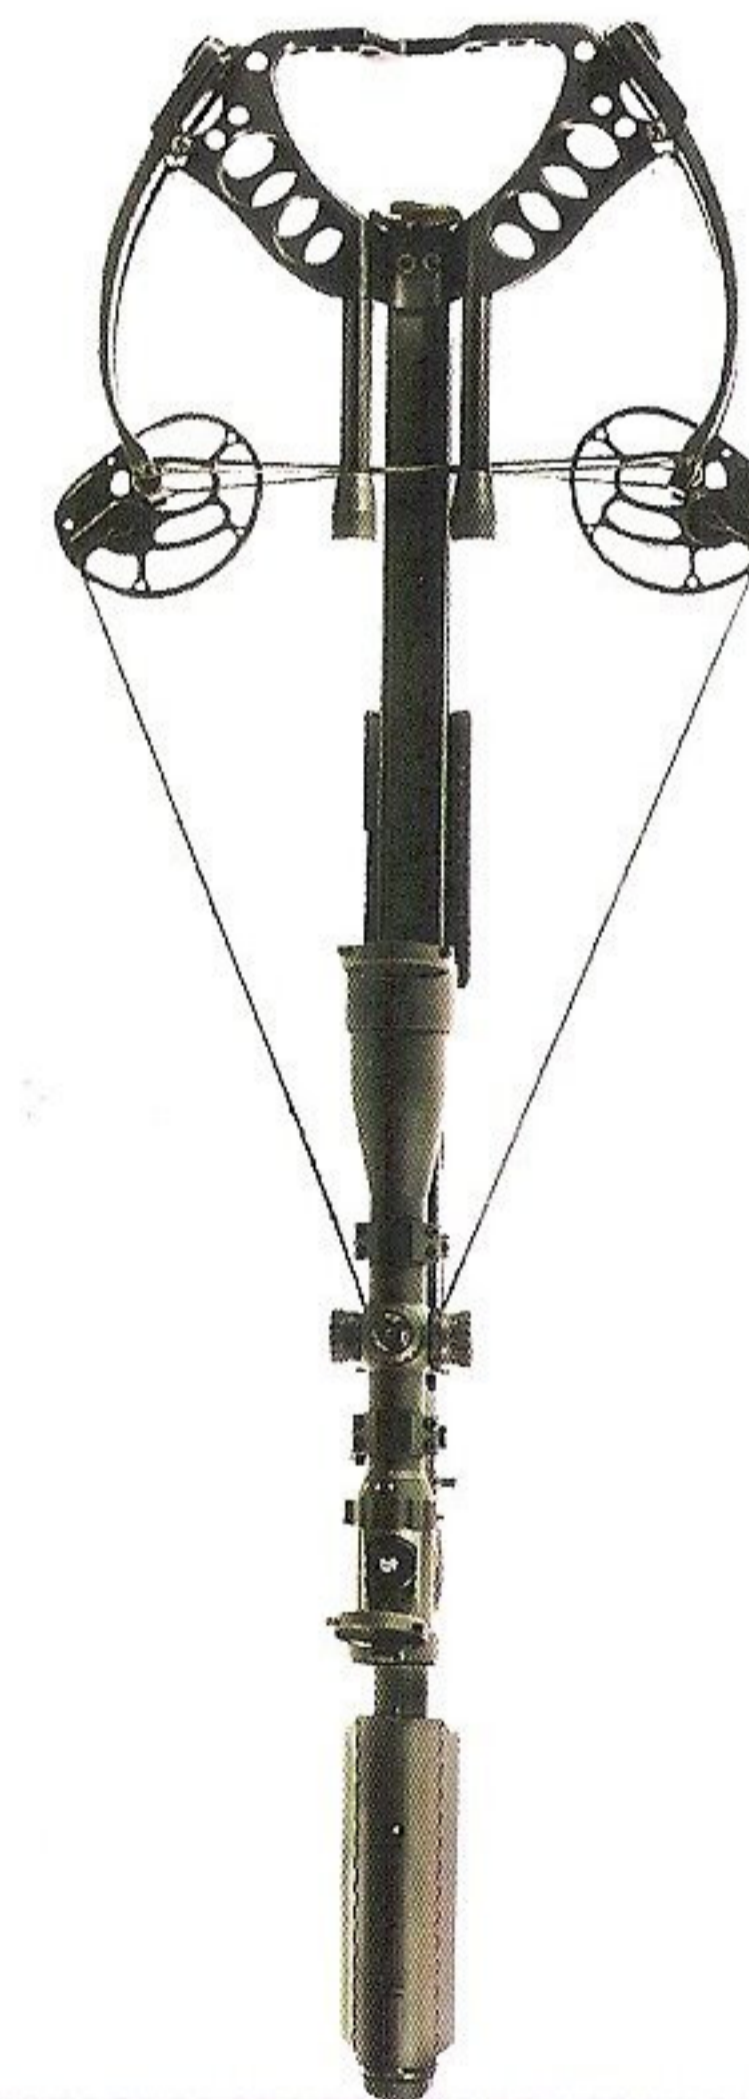

TAC 15™ assembly

Lower receiver and scope not included

ORDERING INFORMATION

TAC 15™

TACTICAL ASSAULT CROSSBOW
